

Anti-Microbial Certificate

Fidelity Industries wall coverings shall contain anti-microbial additives to resist the growth of mildew and bacteria, including staphylococcus aureus, streptoceticillium and mixed fungal spore such as aspergillus Niger, Chaetomium Globo sum, and penicillin funiculosum.

NOTE: All wall surfacing materials, including wallcovering, should be selected taking into account the building in which they are to be installed. Buildings which have had liquid or vapor moisture infiltration problems, or which have other conditions that make moisture infiltration likely are at risk for mold growth. In such circumstances, consult with a professional concerning benefits and limitations of vinyl wallcovering.
